

**WALESI**

*The Future is Brighter*

# History of Walesi

- ❖ Walesi is the State-Owned Commercial Enterprise providing quality, free-to-air digital television to the people of Fiji.
- ❖ It was founded on 2 April 2015 by the Fijian Government. This was the Fijian Government initiative to provide access to digital television to every household in Fiji.
- ❖ Walesi Digital Television Platform trial began on 1 August 2016, for the viewers in the Suva-Nausori Corridor, in the Central division of Fiji, who were the first in Fiji to experience Free to Air Digital Television.
- ❖ Walesi was officially launched on 20<sup>th</sup> December 2017.

# **Walesi Offices**

- ❖ Walesi has four (4) regional offices in Suva, Lautoka, Nadi and Labasa
  
- ❖ The Head Office of Walesi PTE Limited is based at 8 Adi Davila Road, Domain, Suva.

# **Walesi Services**

- ❖ Walesi Set Top Box (DTT)
- ❖ Walesi Satellite Television - Remote/Maritime Islands/Hotels/Resorts (DTH)
- ❖ Walesi Mobile App - Smartphones/Tablets (OTT)
- ❖ digitalFIJI Free Wi-Fi - Hotspot in Markets Fiji Wide
- ❖ VSAT - Internet for schools and communities

# Channels on Walesi

1. FBCTV
2. Fiji One
3. FBC Sports HD
4. MaiTV
5. Na Lololo
6. FBC2
7. Parliament Channel
8. Hope Channel
9. Education Channel

Provision for Adhoc Channels such as PPV, Election Channel (2022)

# Digital vs Analog

- Walesi is providing 100% coverage in Fiji compared to 60-65% coverage for Analog
- Walesi offers better picture and sound quality over Analog
- Walesi Set Top Box (STB) offers multiple channels on one connection (HDMI or AV) to the TV sets
- Program information (Electronic Program Guide) on STBs
- Program record and play later at own convenience on STBs

# Picture Quality

Walesi

Analog

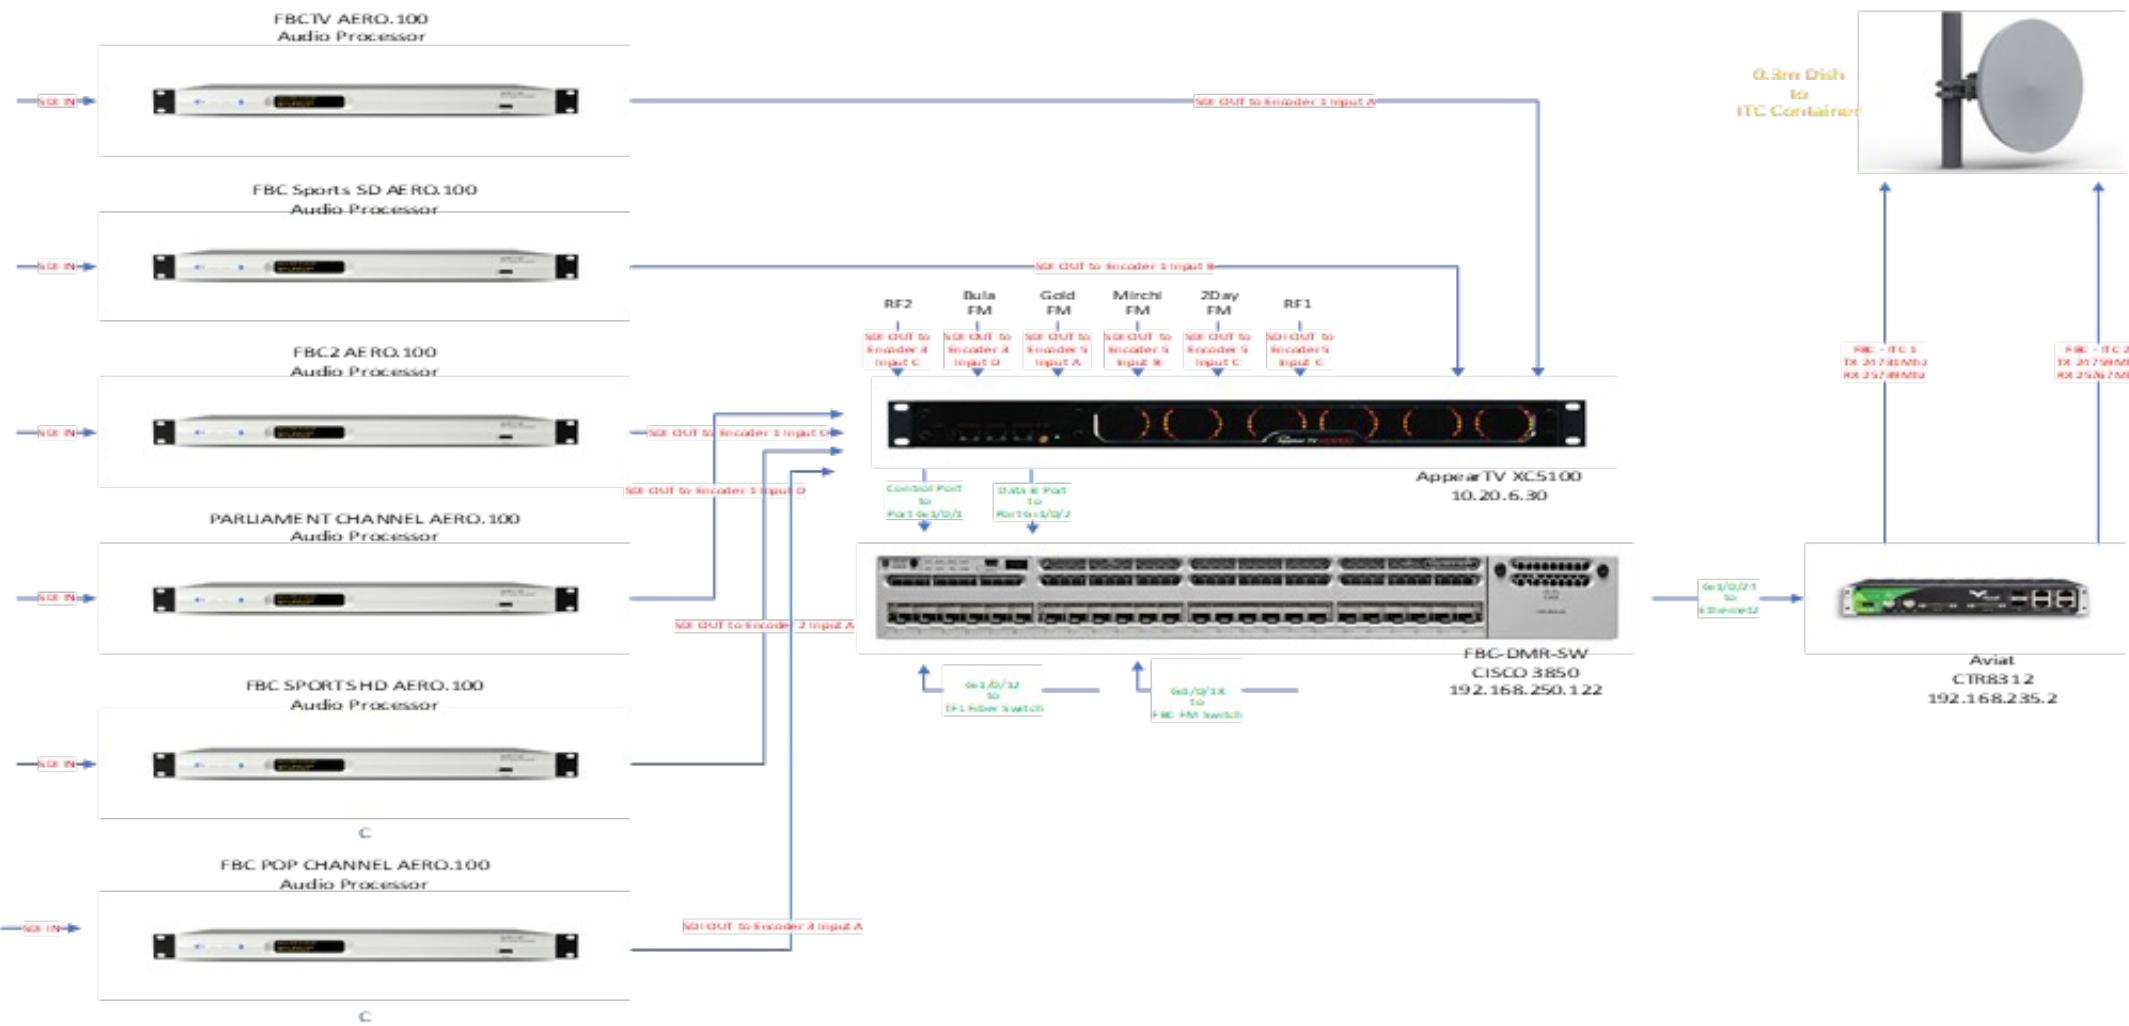

# Satellite Services

- Eutelsat 172B
- Coverage extends to Oceania, part of Asia and part of North America. Potential unlinking services to these regions
- Robust C-band
- VSAT – internet over satellite (commercial clients)
- Remote transmitter sites monitoring
- CAM (Conditional Access Modules) solution for Hotels/Resorts

# OTT

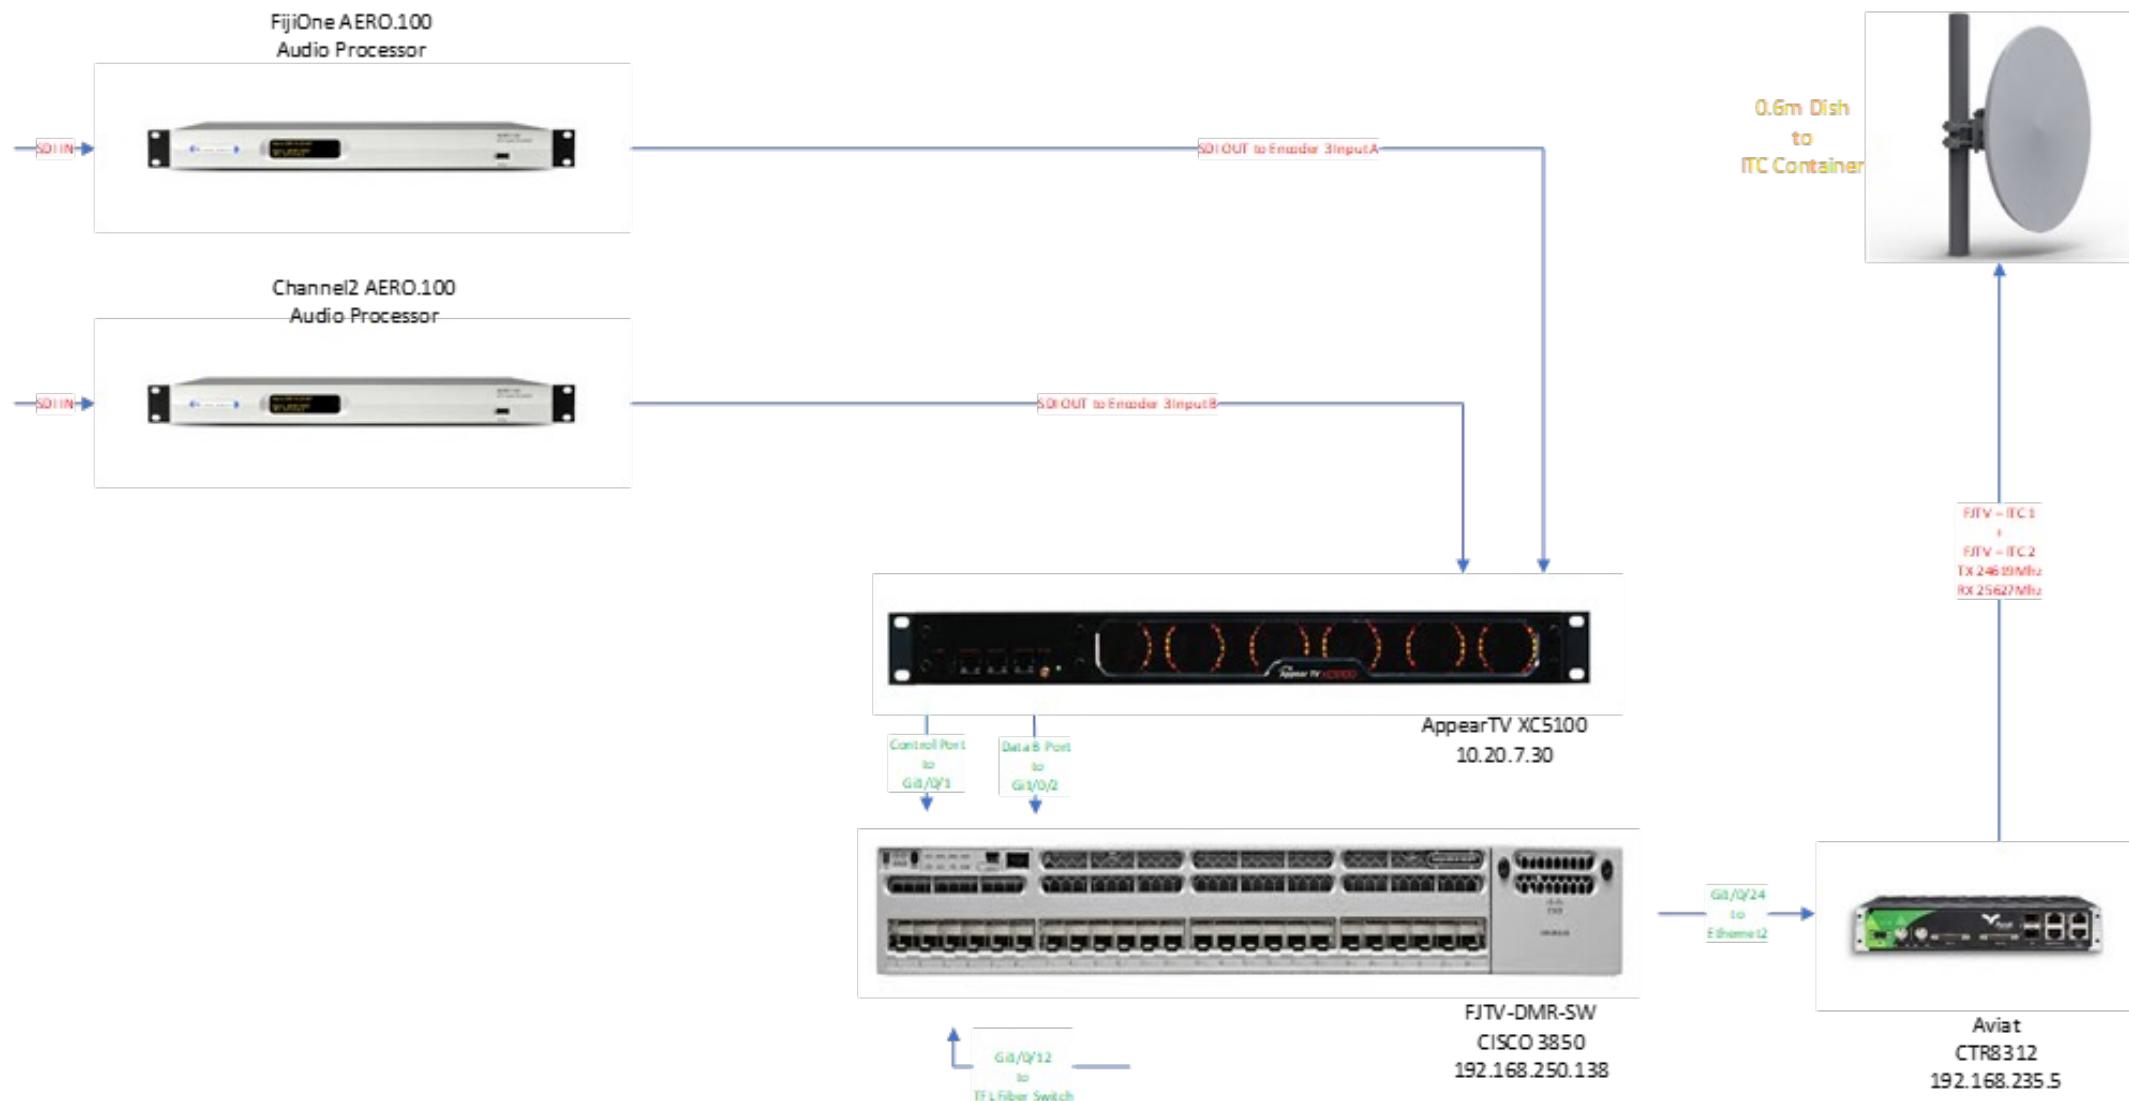

1. The current way to go for most broadcasters/content providers
2. Content can be Geo-blocked/enabled
3. Video On Demand service opportunities
4. Third party (ISP) is involved – revenue share model
5. Marketplace/advertisements
6. Options for interactive features
7. Other emergency/medical/general services can be integrated

# Networking

- In-house Network Engineer
- Member of APNIC
- Connectivity on IXP Switch at Fintel
- Firewall – FortiGate 100F (Main and Slave)
- Cisco Switches 3850 (Replacing them with 9200/9300 Series)
- Setup Boxes are activated via license keys from Subscriber Management Server
- OTT Users are activated via the IP Blocks provided by ISPs

# **Network Risks**

## Service Downtime (Outages)

**Cause:** Hardware failure, software bugs, or network congestion.

**Impact:** Disruption of live broadcasts or on-demand services, leading to customer dissatisfaction and loss of revenue.

**Example:** A server crash during a major sports event can cause mass user drop-offs.

## Cyber Attacks (e.g., DDoS, Hacking)

**Cause:** Malicious actors targeting the network to overload or breach it.

**Impact:** Service disruption, data theft (customer info, content), and potential legal issues.

**Example:** A DDoS attack that overwhelms the streaming servers.

# Signal Interference or Degradation

**Cause:** Issues in satellite links, terrestrial transmission, or bad network routing.

**Impact:** Poor video/audio quality, buffering, or blackouts.

**Example:** Interference from nearby electronic equipment disrupting digital TV signals.

# Insider Threats or Misconfiguration

**Cause:** Human error, poorly configured firewalls/routers, or disgruntled employees.

**Impact:** Unintentional downtime or intentional sabotage, leading to service vulnerability.

**Example:** An engineer accidentally disables access to a core content delivery server

# Opportunities

1. Extend satellite-based services to remote areas in Pacific nations where access is limited.
2. Offer consulting, network operation center (NOC) and DTV support to Pacific nations developing or upgrading their broadcast systems.
3. Provide educational channels and public service broadcasting (e.g., disaster awareness, health, agriculture, and civic education) in partnership with Governments or NGO
4. Form a regional DTV alliance with broadcasters from Pacific Island nations to collaborate on content sharing, standards, and joint investments.

# END
